

Brainstorm & Idea Prioritization Template

Date	19 September 2026
Team ID	
Project Name	ShopEZ — Apparel E-Commerce Application
Maximum Marks	4 Marks

1. Problem Statement Definition

How might we build a reliable, easy-to-use e-commerce platform that gives shoppers accurate size- and color-level stock visibility and a fast, trustworthy checkout — while giving store admins a single dashboard to manage products, orders, and store content?

2. Brainstormed Idea Groups

- **User Experience Features:** Category- and search-based browsing, product pages with live per-variant (size + color) stock, a persistent server-side cart, a streamlined checkout with shipping address and payment method selection, and order status tracking from a profile page.
- **Trust & Feedback Features:** Star ratings and written reviews tied to real products, with the average rating and review count recalculated automatically as reviews come in.
- **Secure Infrastructure Features:** JWT-based authentication with bcrypt-hashed passwords, a single role field separating regular users from admins, and middleware (protect, adminOnly) guarding every sensitive route.
- **Admin Management Features:** A dedicated admin dashboard covering full product CRUD (including variant-level stock), order management with status updates, and site-wide settings for the homepage banner and managed category list.

3. Idea Prioritization Matrix

- **High Importance / High Feasibility (Built):** JWT authentication with role-based access, category and search-based catalog browsing, size + color variant stock tracking, a persistent cart, checkout with real stock validation, order status tracking, star ratings & reviews, and a complete admin panel (products, orders, settings).
- **High Importance / Lower Feasibility (Near-Term Enhancements):** Integrating a real payment gateway (Razorpay/Stripe) to replace the current Cash-on-Delivery-only flow, moving from pasted image URLs to real cloud image uploads (Cloudinary/S3), and deploying the app to a live, publicly accessible URL.
- **Lower Importance / Future Polish:** Real-time order status notifications, wishlists/saved items, and richer admin analytics (sales trends, top-selling variants).
